

## 50HZ Electromagnetic Vibration Table Vertical Vibration Tester Testing Machine

### Features:

- A. Digital LED Display: The level of vibration you can set and storage by yourself from 0~100.
- B. It can be displayed simultaneously: the vibration amplitude level, the time has been set and the time has run past.
- C. It was used with advanced Soft-start circuit for a more stable operation
- D. Automatic setting, simple operation.
- E. Data Hold for the test time and the level of vibration, even it is power cut suddenly.

**Model:** iMP-3000A

### Application:

Electromagnetic vibration tester is widely used in national defense, aviation, aerospace, communications, electronics, automotive, appliance and other industries.

This equipment is used to detect early failure, simulate the actual condition assessment and structural strength test, wide range of products for wide, the test results are obvious, reliable.

### Product Description:

Power Frequency iqualitrol Intelligent Vibration Testing Machine is a kind of instrument which used to test the product should be anti-vibration.

This Vibration Testing Machine used with advanced microcomputer technology, very easy for operating, also have a lot of features which can help you test the object that need to test for anti-vibration.

### Specifications:

MAX Load	40kg
Power Input	AC220V/50Hz, AC110V/60HZ
Monitored values of Vibration	100%(Display:100)
Time Setting	1 Second~100 Hours(Display:99:59:59)
Power	0.9KW
Vibration direction	vertical
Vibration frequency	50HZ
Adjustable amplitude when unload	0-±2mm A 0-15kg Load:0-±2mm B 30kg-40kg Load:0-±1.8mm
Dimension	400mm×350mm×280mm(L×W×H)
